AFFILIATE RULES

The oldest international [Ransomware] LockBit affiliate program welcomes you.

We are located in the Netherlands, completely apolitical and only interested in money.

We always have an unlimited amount of affiliates, enough space for all professionals. It does not matter what country you live in, what types of language you speak, what age you are, what religion you believe in, anyone on the planet can work with us at any time of the year.

First and foremost, we're looking for cohesive and experienced teams of pentesters.

In the second turn we are ready to work with access providers: sale or on a percentage of redemption, but you have to trust us completely. We provide a completely transparent process - you can control the communication with the victim. In case when the company was encrypted and has not paid, you will see the stolen data in the blog.

We also work with those who don't encrypt networks, but just want to sell the stolen data, posting it on the largest blog on the planet.

PHISHING AS A SERVICE

The screenshot displays a web application interface for a phishing service. On the left is a pink sidebar with the user name 'RB ROBIN BANKS' and a list of navigation items: DASHBOARD, NEW PAGE, MY PAGES, LIVE PANEL, MY SUBSCRIPTIONS, WIDGET, BUY, and INTEGRATION GUIDES. The main content area is titled 'Setup A New Page' and 'New Page'. It features a vertical list of configuration options on the left: Page Type, Bank (highlighted in pink), Options, Page Ranks, Field Options, and Server Details. To the right of these options is a 'Select Page:' section containing a 3x3 grid of bank logos. The logos include Bank of America, Bank of America Live, Capital One Bank, Chase, Citibank, Fidelity, Mountain America CU, PNC, Santander, U.S. Bank, and Wells Fargo. The 'Sullivan County Catskills Mountains of Opportunities' logo is also present in the grid.

WormGPT: The Ultimate Game-changer

Yo, check it out, fam! WormGPT's the real deal, straight outta the hacker's playbook. Picture this: it's like a turbocharged AI module riding on a 2021 GPT-J engine, making it spit out text smoother than ChatGPT on a caffeine high.

But here's the kicker: while OpenAI's holding ChatGPT on a leash, WormGPT's out here running wild and free. No anti-abuse filters, no restrictions—just pure, unadulterated power. You want it to drop some shady lines or cook up a virus? Done and done.

Now, y'all heard about its knack for crafting BEC attacks, right? But lemme tell ya, that's just the tip of the iceberg. WormGPT's packing more tricks up its sleeve than you can shake a USB stick at. Unlimited characters? Check. Memory retention? You got it. And don't even get me started on its coding chops—it's like having a cyber-savvy ninja in your back pocket, ready to whip up some malware mayhem.

But here's the real deal: WormGPT ain't conjuring up anything more mind-bending than a skilled hacker could dream up. Nah, the real power lies in its simplicity and speed. It's like the ultimate hack tool, leveling the playing field so anyone with an internet connection can dive in headfirst.

So, buckle up, folks. With WormGPT on the scene, things are about to get real interesting, real fast.
